Effectively leveraging artificial intelligence and machine learning approaches in time tracking ZKTECO'S cutting-edge ever-evolving landscape of technology is proud to introduce our **uFace 402 Plus** with advanced facial, palm and fingerprint algorithm.
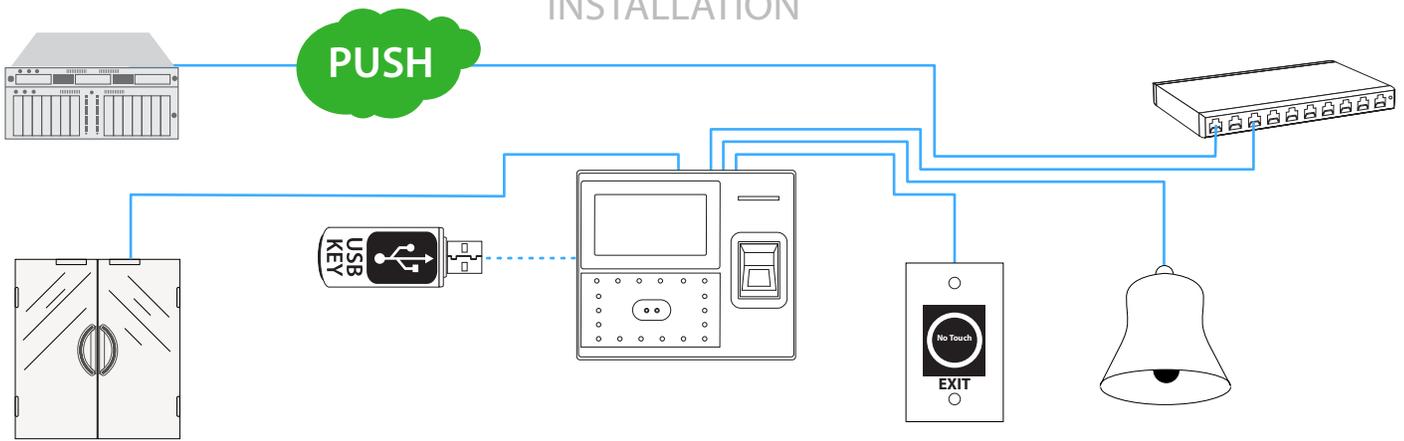

Designed for the future!

With whole facial scanning, the uFace is equipped with ZKTeco's NIR FACE algorithm 12.0. This algorithm features smart facial feature points extraction to mark distinctive features of the face to allow for consistent and accurate recognition. matching speed, high performance in low lighting, and consistent matching in different ethnic groups and skin tones. Designed for the new normal, the device can perform touchless facial and palm identification and is embedded with a mask detection feature that can recognize individuals with face masks. The UFace also features ZKTeco's latest 3 in 1 contactless palm recognition, which uses the palm veins to perform biometric identification.

The terminal's **touch-less palm authentication** method with a novel hand tracking technique allows angle tolerance as wide as +/-60° in the roll axis.

With the advanced palm and face algorithm and multi-biometric verification technology, users may enjoy the terminal's enhanced anti-spoofing ability and its significantly enhanced security level.
